Android App Developer
Due to continued commercial growth, we are recruiting for a number of Android App Developers to join our team in Navan.

We specialise in the delivery of prepaid card programmes and the provision of payments services to a range of clients globally.

What You'll Do:
- Develop new and Innovative native solutions for use by our Customers
- Contribute to the design, development and support of new applications
- Work with other teams and designers to develop a cutting edge mobile banking platform
- Integrate with Internal and External REST API's to connect Apps to services
- Help others around you to grow as developers and be successful
- Ensure the code you've written functions as designed, by creating unit and integration tests as well as working with our QA department

Your Preferred Profile:
- 2+ years of practical experience designing and writing Android Apps
- 2+ years of practical experience designing and writing Object-Oriented Code
- Strong knowledge of Java and Android Studio
- Strong understanding of Android design principles and interface guidelines
- Strong Experience in build and release of applications to the App Store
- Rigor in software engineering best practices, including coding standards, code reviews, source control management, build processes, testing and operations
- Display a willingness to upskill in new technologies
- A Team player with excellent communication skills (both written and verbal), particularly the ability to get your ideas across effectively
- Great interpersonal skills, we're a team that gets on and likes to help each other out

Nice to have:
- Experience with Google APIs
- Experience with any Source control tools (Git or Bitbucket experience preferred)
- Experience working against PCI-DSS requirement would be beneficial.
- Any payments experience would be beneficial.

Please state your **desired salary** and current **notice period** with existing employer on your application.
