

Testing/QA Specialists

Leading Financial Technology Company looking for dynamic, skilful and enthusiastic people to join our Testing/QA team in Meath. The ideal candidates will be dependable team-players who will own and drive the Testing process for our cutting-edge technology products. You will be able to understand Functional and Technical specifications and translate these into Test Scenarios, Cases and Scripts.

The Role:

- This role involves the testing of functionality, which is delivered through a combination of applications and services.
- The successful candidate will own the test pack and associated documents, and be expected to continually refine and improve it to make it as efficient as possible.
- Contributing to all aspects of the QA process for new and existing functionality, through a mix of automated and manual testing.
- Support the development team in identifying and documenting issues, as well as to identify test requirements.
- Execute test cases and provide clear results and metrics to the Project Manager/Lead Architect. Raise bug reports where necessary.
- Manage the Test and Staging environments and associated Test Data.
- Work to accurately evaluate risk and provide estimates for tasks.

Qualifications / Experience:

- A relevant Third level degree in IT or equivalent Testing Qualification (ISEB, ISQTB)
- Proven professional experience as a Tester/QA Analyst or equivalent experience in a Technical Support Environment.
- Experience with Automated Test Tools (Selenium, Ranorex, Cucumber etc.)
- A Team player with excellent communication skills (both written and verbal), particularly the ability to get your ideas across effectively.
- Strong SQL knowledge.
- Technically proficient, familiar with the major development platforms and languages (C#, Java etc.) and RESTful webservices.
- Experience with Jira would be beneficial.
- Experience working within the whole software development lifecycle.
- Willingness to learn and be challenged in a fast-paced environment.
- Understanding of financial services, banking and payment transactions processing would be beneficial but not a pre-requisite.

Experience working within PCI-DSS requirements would be beneficial.
